## A Word to Customers on the Subject of Repairs for Stoves.

Recognizing the great necessity for prompt and accurate shipment of repairs, we have organized a separate *repair department*, and have set apart in our warehouse a space sufficient to carry a full stock of repairs for all stoves ever made by us or our predecessors in the business, and can assure you prompt attention to orders if you will bear in mind the following facts :

1st.—We are not presumed to know the *name, number and date* of the stove for which you need repairs, and therefore it is positively necessary to state each of these items clearly in your order.

2d.—Where there is more than one date on a stove, it is always best to state all of them.

3d.—In determining the relative position of similar plates in any stove, face the front of the stove and designate the right or left-hand plates from that position.

4th.—In distinguishing between right and left-hand ranges, we consider a range with the oven on the right, a right-hand range, and treat the order accordingly, unless worded so that we cannot interpret it in that way.

5th.—We consider and call *the front* of all ranges made by us the side on which oven door opens.

6th.—When you do not know the name of a piece wanted, a rough sketch of it, with such description as you can give, will enable us to determine the name.

7th.—When you order repairs for the fire chamber of a stove, always state whether grate is *plain, anti-clinker, duplex* or *triplex*.

8th.—When we return an order, with request for further information, it is not for the purpose of delaying your order, but to save you the greater delay and expense which you would have if we were to guess the meaning of your order and should ship you the wrong pieces.

9th.—When orders for repairs have been filled by us, according to our best understanding of an order, we will not be responsible for errors, and will not receive castings returned without first having been advised as to the error, and then only when the fault is clearly ours.

### Stove Repairs.

We are successors to and the only foundry that can furnish repairs for stoves made by the following firms :

Smith, Francis & Wells,  
Smith, Wells & Co.,

Smith, Johnson & Co.,  
Shantz & Johnson,

Shantz & Keeley,  
O. B. Keeley & Co.

TDCAT 1896/97  
# PAPV03B601

**Use the  
Names Given Below  
in Ordering  
Fire Box Repairs.**

Description of Grate, Page  
27.

- No. 1. Grate Cogs.
- No. 2. Front Grate Carrier.
- No. 3. Back " "
- No. 4. Long or Shaker Part  
of Triplex Grate.
- No. 5. Short Part of Triplex  
Grate.
- No. 6. Brick Rest or Bed  
Plate.
- No. 7. Fire End or Open End  
of Range.

**IN ORDERING WATER BACKS.**

State clearly whether you want the openings to be in the end or the side. If the water back is to have the opening on the side, the connections must necessarily be made through the *end of the range*. But if the water back is to have the openings at the end, it will follow that the connections must be made through the *back of the range*.

Therefore specify clearly whether you want the openings to be in the end or the side of the water back, or else state if the connections are to be made through the end or back of the range.

## SPECIAL NOTICES.

### Our Warrant and a Word to Customers on the Subject of Setting up a Stove.

Every stove made by us is warranted to work properly in the capacity for which it is made. We use the best material, and employ the best workmen that we can obtain, and have an equal if not greater interest than our customers in knowing that every stove we make is satisfactory to the user in every respect.

To attain this end, we subject every stove to careful and frequent inspection, and when we ship it, are reasonably sure that it is complete.

Should the stove arrive at destination in a broken or imperfect condition, we are not responsible for the damage done by the railroad company, but if you will receive the stove and report to us carefully the extent of damage, we will do all in our power to assist you in repairing the stove.

When any of our stoves are sold, the following rules should be observed :

1st.—Never set a small stove to do the work of a large one.

2d.—Never allow a stove to be put up with pipe smaller in area than the collar on stove.

3d.—Never send a stove to be put up without a careful examination, to determine that no plates have been broken or misplaced in shipping.

4th.—Never attach a stove to a chimney without knowing that all unnecessary openings in the chimney have been properly closed.

5th.—Never send a stove to be put up without giving full instructions as to the use of dampers and cleaning of flues.

And if, after a careful observance of these rules, one of our stoves fails to do the work, you will report the matter to us promptly, we will always endeavor to have the error corrected ; but we will in no case allow a stove to be returned to us until we shall have first had an opportunity given us to send one of our men to examine it.

Any customers desiring to return articles to us for repairing, nickel to be renewed, stoves broken to be repaired, stoves new for credit, must first have our consent. In the event of goods returned under the above, the following conditions must be observed :

1st.—Send bill of lading.

2d.—Enumerate the name and kind of articles returned, advising us what you wish done.

3d.—Tag the article with your name and address, so we may know from whom they came. Unless these rules are observed, we take no responsibility as to when the goods will be returned to you, or credit given.

4th.—We are not responsible for repair castings broken in transit, and will not make them good.

## COLUMBIAN NEWPORT.

This is the most complete brick set and portable range made. With six holes, sheet flue, dust flue, single drop damper, which can be repaired, without disturbing the top of the range, and everything of the most modern construction supplied for convenience and the pleasure of the housewife.

The cut on page 7 shows a left-hand range, the oven being on the left.

### See What We Have:

1st.—A line of brick set and portable ranges, right and left-hand ovens, with triplex or flat grate in two sizes.

2d.—Water backs supplied for all sizes.

3d.—It is made with low closet and ash sifter. Can have ash pit opened in bottom to drop ashes in pit in cellar, if desired.

4th.—It is made with low closet, less ash sifter. This closet has sliding doors.

5th.—It is made with base, paneled front, less doors. This is some little cheaper than other styles but not quite so convenient.

6th.—It is an up-stairs heater, so arranged as to carry all the heat radiated in the closets as well as what is thrown off the back part of the range.

This is carried up-stairs by means of a hot air pipe as shown in cut, and has no connection with any part of the fire box of the range and hence will not throw gas.

7th.—It has ventilated oven. The register wheel in the centre of nickel panel admits sufficient draft to carry off through the opening in the oven plate any and all gases which may arise from baking and roasting. Smoke pipe out of back or off top. Clean out flue stop in front.

The Triplex Grate is adjusted and brought to its simplest form and convenience, and can be removed and applied without disturbing the water back.

### Sizes and Dimensions of Brick Sets.

Height of No. 7-16 on closet, 2 feet  $3\frac{1}{4}$  inches, between jambs 2 feet 6 inches, depth of jambs 12 inches.

Height of No. 8-18 on closet, 2 feet  $4\frac{1}{2}$  inches, between jambs 2 feet 9 inches, depth of jambs 12 inches.

Height of low closet No. 7-16,  $10\frac{1}{4}$  inches.

Height of low closet No. 8-18,  $11\frac{1}{4}$  inches.

Prices of circulating boilers and stands given on application. Much depends upon sizes and whether galvanized or plain.

Straight brass water back couplings, per set, net, ..... 75c.

Bent brass water back couplings, per set, net, ..... 85c.

Make your order clear beyond a doubt, so that no mistake is made as to grate needed, oven right or left, kind and size of boiler needed, base, sliding door closet, sifter closet, elevated closet, or shelf, etc., etc.

Prices of circulating boilers and connections, if not desired, deducted from the list. Prices and information given by addressing

**THE KEELEY STOVE CO., Columbia Pa.**

" 8-20 " 9-20,	" " " " " "	22 " "	" "
" 8-22 " 9-22,	" " " " " "	24 " "	" "

Fire box suitable for Anthracite or Bituminous Coal, wood fixtures for wood. Cast linings when so ordered. Ironstone or clay linings go as a rule. Bed plate in two parts so that fire box can be repaired without disturbing water back. Every Range warranted.

Never fails. To operate it, see that your chimney is clean and draft good. Close all openings in your chimney and see that a neat fitting pipe collar closes the openings, if any, around the pipe where it enters the chimney. Six-inch pipe should be used for anthracite coal; seven-inch pipe for bituminous coal. Push damper in to bake.

We warrant our goods, but require conditions reasonably favorable for the operation of our stoves.

Reservoir Range, when used for baking should have the Reservoir damper closed. (Handle pointing up).

## COLUMBIAN CHOICE.

Showing Reservoir.

Made With and Without Reservoir and with Right-hand Oven Only.

*Shipped with Pouch Feed if desired. Made with Triplex grate. The only perfect grate made with Reservoir.*

# COLUMBIAN CHOICE, AND NEW CAPPELLO.

Showing Heating Attachment.

The application shown in the above cut is perfectly adapted to the following Ranges of our make :

<i>Columbia Choice.</i>	<i>New Cappello.</i>	<i>Columbian Plato.</i>	<i>New Johnstown.</i>
7-18, 8-18,	7-18, 8-18,	7-18, 8-18,	7-18, 8-18,
8-20, 9-20,	8-20, 9-20,	8-20, 9-20,	8-20, 9-20,
8-22, 9-22.	8-22, 9-22,	8-22, 9-22.	8-22, 9-22.

The dealer will please add to the respective prices of these Ranges \$2.50 list, for this Double Heating Attachment.

*Instructions for its Use.*—Open the oven door slightly and pull out the Hot Air damper if you wish to throw the heat from the oven up stairs. When the oven is in use for baking or roasting, close the damper by pushing it in as tightly as possible.

## THE TRIPLEX GRATE.

The cuts below illustrate the Triplex Grate as used in the Columbian Choice, Columbian Plato (1894), New Cappello, Columbian Newports, Columbian Charm, Columbian Star, Columbian Daisy and Columbian Dandy Ranges. Grate and application has been tested and tried, and we warrant it will do better work, last longer, and save more coal than any other grate made.

The Triplex Grate. Why it is Best and How to Operate it.

First.—because it has all the advantages of the Duplex, Dockash and Flat Grates, simple as the flat Grate and does not need long experience to manage it.

Second.—It is more desirable than any other form of Grate, because it has three separate sides, or three grates in one, and is not easily warped by the action of the fire.

Third.—Because our application is perfect, the Grate, is always adjusted and in position, when you can apply or remove the shaker. The nib on the shaker and slot or groove under shaker bar are intended the one to pass through the other when you apply or remove shaker. Observe this rule in shaking the grate. If draught is good, keep damper pushed in, or push it in one hour before baking. You cannot bake without a good fire, so shake out all the dead matter in your fire box, and keep a good, clean fire for baking. The life and durability of the grate is prolonged by keeping a clean ash pit.

Fourth.—Because, after eight years of trial upon the market not one Triplex Grate as applied by us in the Columbia Ranges has been condemned. Not a half dozen repaired out of the many thousands sold. We challenge comparison.

## NEW CAPPELLO.

Made with Right and Left-hand Ovens. Showing Right-hand Range.

Made with Pouch Feed if Desired.

This Range is made heavy and strong, with a fire box adapted and made for hard coal, bituminous coal or wood. Triplex Grate, the best Grate in use.

Water Backs made for all sizes. The bed plate for the New Capello Range is made in two parts so that the grate can be removed without disturbing the water. Push damper in to bake.

## COLUMBIAN STAR AND COLUMBIAN CHARM RANGES.

The following information is common to our line of Columbian Star and Charm Ranges, except that the 7-14 Columbian Charm is not supplied with low closet and is made with right-hand oven only. Aside from these exceptions, the Columbian Star and Columbian Charm are made with right and left-hand ovens. In offering these two lines of Ranges complete in all their various styles (that is, square with shelves, high and low closets, with reservoirs, and high and low closets, wood fixtures, cast and iron stone linings, etc.), we have no misgivings in saying that we offer a very superior line of goods, made in every desirable style, giving the dealer who handles and pushes them the lead over all competitors. These goods have been fully and completely tested in our works, and when we say they bake and roast perfectly we say it from experience. We use the ordinary Flat and the Triplex Grates in this line of Ranges. During the past four years our efforts have been to give the purchaser the best grate made, and we can safely say that for the "Triplex." Notice our application of it. Work it as we suggest, and you can run the fire the year through without trouble. We desire to call our friends' and patrons' attention to the fact that we warrant every Range to work first-class under these conditions:

*First.*—When the pipe is not reduced below the size of the pipe collar.

*Second.*—When the chimney is good and all openings in it closed except where the Range is attached, and that must be filled with the pipe, or the opening (if any) around the pipe should be closed with pipe collar.

The dispatch with which people expect their orders filled requires care on the part of the one who orders the goods; hence, we say, study your catalogue, so that you may give us, in ordering, the right name and number.

Dates of patents, names of grates, right or left hand range, single or double heating stove, are essential points to keep in mind.

## COLUMBIAN STAR.

Six-hole Range. Left-hand Oven. Showing No. 3 Shelf.

Made with Right and Left-hand Ovens.

	Oven Size,	Less Res. and No. 3 Shelf.	With Res. Less No. 3 Shelf.

Columbian Star and Charm.  
ooo

The Columbian Star and Charm ranges were first made in 1892, as illustrated in 1893 catalogue on pages 26, 27, and 28. This range was first made with carved edge top. It had a three bar triplex grate with light shank, this was afterwards changed and made heavier, to use Daisy shaker, and shaker door marked "Grate improved 1893." This grate was again changed to the two bar triplex grate and shaker door marked "Grate improved 1895." In 1896 the entire top was changed to a wide edge, new oven door, new oven door panel, and new feet and skirting and new broiler door. This was indicated by printing on the broiler door "Top improved 1896," as illustrated in 1898 catalogue, pages 32 and 33.

## COLUMBIAN CHARM.

Six-hole Range. Right-hand Oven.

made with Right or Left-hand Oven, except 7-14, which is Right-hand. With Plain or Triplex Grate.

## Columbian Daisy

000

Columbian Daisy was made in 1892, as illustrated in 1893 catalogue, pages 33, 34, and 35. This range was made with carved edge top. It has a three bar triples grate light shank, this afterwards changed and made heavier to use Daisy shaker, shaker door marked "Grate improved 1895." This grate was again changed to two bar triplex grate and shaker door marked "Grate improved 1895." In 1896 the entire top was changed to a wide edge, same feet were used but made longer and no change in the skirting, broiler door was marked "Typ improved 1896," to indicated these changes. See pages 58 and 59 of 1898 catalogue.

## TRIPLEX GRATES.

The Following Cuts Show the Best Grate Ever Made. Open and Closed Positions.

OPEN.

CLOSED.

As used in Columbian Art, Columbian Aid and Columbian Joy Heaters.

**Some Reasons Why the Triplex Grate is the Best as Used in our Ranges, Furnaces and Heating Stoves.**

*First.*—Because it has all the advantages of the Duplex, Dockash and Flat Grates. It is simple as the Flat Grate, and does not need long experience to understand and manage it.

*Second.*—It is more desirable than any other form of grate, because it has three separate sides, or three grates in one, and is not easily warped by the action of the fire.

*Third.*—Because our application is perfect, the Grate is always adjusted and in position, when you can apply or remove shaker. The Shaker, when applied, must be moved from right to left with a quick motion, and no oftener than needed to clean the fire.

## COLUMBIAN ART CIRCULATOR AND HEATER.

In offering our leading first-class Base-burner and Heater to the trade, we offer a Heater rich in design, nickeled in the most artistic manner, and possessing every desirable feature of symmetry and beauty. *The Columbian Art* is made in four styles of finish and grades of price, which will enable the dealer to select and classify a grade of dress and price, so as to enable the poor man to buy a first-class article at a low price, while others possessing the most fastidious ideas of nicety can find an article clothed in the richest dress and insured to be an article of great utility. In every case and class you will find the Heater made from first-class material, molded by the very best workmen, well mounted and neatly finished.

Every stove is a Double Heater, enabling the buyer to have the greatest amount of service with the least possible expense.

The system of circulating is complete, viz: the cold air is drawn off the floor, carried through the stove and thrown off through the heat pipe collar. This, with the immense amount of radiating surface, makes the entire series a powerful and effectual line of Heaters.

We have no misgivings in saying that we give our patrons more for the money expended than any other makers who offer a like commodity.

We have applied the Centre Draw and Triplex Grate to this Heater, so that the dealer can apply either one or the other to suit the case in question. Triplex Grate illustrated on page 74.

GIVE IT A TRIAL.

## HOW TO OPERATE THE COLUMBIAN ART HEATER AND CIRCULATOR.

The stove should be capable of heating the space required without being fired to its utmost capacity, as fuel is most economically used when the stove is doing its work with ease.

X Before kindling your fire, see that your chimney is clean, the draft good and all openings closed, except where the pipe enters the chimney. If the pipe should not fill the opening in the chimney, close the same with a neat-fitting pipe collar. Nos. 24 and 25 should have a six-inch pipe. *The pipe may*

X Start the fire by opening both the direct draft damper and the draft slide in the ash-pit door. See that the dust damper is closed (pushed in). If your chimney is good, the fire will kindle nicely under these conditions.

X To increase the draft by opening the ash-pit door may throw the smoke into the room and smoke the mica, or tarnish the nickel. This can be avoided by procuring charcoal with which to start the fire.

When your fire is kindled or coal ignited, close the direct damper, and the stove will get hot from bottom to top.

Charge the magazine regularly. *Do not let it get empty.*

To check the fire, first close the slide in ash-pit door and pull out the dust-damper handle. If your chimney has a strong draft it would be well to have a damper in the smoke pipe, as none of the mica doors should be opened during the operation of the Heater. If your chimney does not have a sharp, quick draft do not damper the pipe, as the use of the damper depends upon the draft of the chimney. This Heater is gas-tight, and so warranted, and must be operated as directed. Local circumstances enter very largely into the operation of a stove, hence a set rule will not answer for every stove sold. The person operating must study conditions and apply rules.

IN EVERY STOVE WE MOUNT, THIS CIRCULAR IS FOUND. THE DEALER WILL PASS IT OVER TO THE CONSUMER FOR STUDY.

# COLUMBIAN ART CIRCULATOR AND HEATER.

Full Nickel. Made with Centre Draw or Triplex Grate.

	Half Nickel, less	Half Nickeled with	Nickel	Plain. None of
	Nickel Canopy Top.	Nickeled Canopy Top.	Finished.	the Parts Nickeled.
No. 24.....	\$35 50	\$37 00	\$41 00	\$33 00
" 25.....	41 50	43 00	47 00	39 00

Mention the Grate desired in ordering new goods or repairs. We ship the Columbian Art with Triplex Grate, unless the order reads very clearly to the contrary.

# COLUMBIAN ART REVERTIBLE FLUE HEATER.

Plain Finish. None of the Parts Nickerled.

No. 24.....	\$33 00
" 25.....	39 00

Cut of Triplex Grate illustrated on page 74.

This is a departure from the modern way of dressing stoves, but we give the purchaser the advantage of buying an article of equal utility at a very low price.

See description on page 76.

Mention the grate desired in ordering new goods or repairs. We ship the Columbian Art with Triplex Grate, unless otherwise ordered.

# SKELETON VIEW OF THE COLUMBIAN ART HEATER AND CIRCULATOR.

Made in Two Sizes.

No. 2 represents nickel Tile-band, with front, right and left-hand parts. In addition to what is shown here, there are still two pieces to complete it, viz: Right and left-hand return corners on the back.

No. 3 shows swing cover with false bottom. In mounting this bolt the urn fast to nickel swing cover, set it over false bottom, and bolt the nickel swing cover, false bottom and swing cover handle together, by running bolts through the four corners of the nickel swing cover.

No. 4 represents the bottom magazine Ring. This is the only part of the magazine that is likely to be destroyed by use, and can be placed in position very easily when burned out. When your cylinder is burned out, remove the bottom magazine, take off the bar No. 5, marked "Improved 1893," which is in position in front, between upper and lower mica doors; turn the cylinder in position shown in cut, remove the old one and put in the new. To divide the weight when handling the Columbian Art Heater, part it as shown in cut (at base top). This gives you all the freedom and convenience needed to repair grates, etc.

# COLUMBIAN JOY.

Made in Five Sizes. Nos. 111, 112, 113, 115 and 116.

Revertible Flue, Base Heater, draws the cold air off the floor and operates on the circulating system. Made with Centre Draw and Triplex Grate. The style of grate desired should be clearly named in your order for new goods or repairs. Triplex Grates go as a rule.

Five sizes of Fire Pots, 11, 12, 13, 14½ and 16 inches respectively.

	List Price.	With Nickel Canopy Top.
No. 111, .....	\$21 00.....	\$22 25
" 112, .....	24 50.....	25 75
" 113, .....	28 00.....	29 50
" 115, .....	33 00.....	34 60
" 116, .....	41 50.....	43 25

On this stove the Swing Cover, Under Tops, Cold-Air Hoods, Name Plates, Foot Rails, Feet and Skirting are Nickerled. For description of grate see page 74.

## COLUMBIAN JOY HEATER.

Sectional View.

The above cut illustrates a sectional view of the COLUMBIAN JOY. If the dealer, when ordering repairs, will use these names and refer to this page, it will be helpful to us in understanding his order and making it clear. To put in a new cylinder, the stove may be parted in the centre by taking out four bolts. The magazine lifts out at the top without removing or disturbing a bolt. The grate can be removed and placed in position through the ash door. The farmer, laborer, or any person with screw driver, wrench and hammer, can very quickly and easily repair this heater. These points are of very great importance to the dealer and economical to the purchaser.

# COLUMBIAN AGE.

Made in Five Sizes, Nos. 211, 212, 213, 215 and 216.

Revertible Flue, Base Heater, draws the cold air off the floor, operating on the circulating system. Made with Centre Draw and Triplex Grate. The style of grate desired should be clearly named in your order for new goods or repairs. Triplex Grates go as a rule.

Five sizes of Fire Pots, 11, 12, 13, 14½ and 16 inches respectively.

" 213.....	28 00		29 50
" 215.....	33 00		34 60
" 216.....	41 50		43 25

On this stove, Swing Cover, Under Tops, Name Plates, Foot Rails, Feet and Skirting are Nickeled. For description of grate see page 74.

## COLUMBIAN IVY.

Made in Five Sizes, Nos. 111, 112, 113, 115 and 116.

No. 111 .....	\$18 75
" 112 .....	22 00
" 113 .....	25 25
" 115 .....	30 00
" 116 .....	38 00

The Columbian Ivy is a Revertible Flue Double Heater, made very plain without any nickel except the Urn. In this Heater the Triplex and Centre Draw Grates can be used. The Triplex is used as a rule.

For description of Grate see page 74.

# COLUMBIAN ERA.

A Straight-draft Double Heater.

Made in Three Sizes.

Sizes of Fire Pots 11 in., 12 in., 13 in.

	No. 111.	No. 112.	No. 113.
List Price, less Canopy Top,.....	\$18 00	\$21 50	\$25 00
" " with " " .....	19 25	22 75	26 50

Made with triplex or centre draw grate. Triplex sent unless otherwise ordered. A very handsome and cheap heater. Nicely nickeled. When canopy top is desired your order should so state. Not as powerful as a revertible flue heater, but surpassed by none in the class of straight drafts. For description of Grate see page 74.

## COLUMBIAN TROPIC.

**A Full Revertible Flue, Single Heating Stove, with Tea Kettle Attachment.  
Made With Centre Draw and Triplex Grate.**

	No. 11.	No. 12.	No. 13.	No. 14.	No. 15.
Price List, less Canopy Top.....	\$18 00	\$21 00	\$24 00	\$27 50	\$31 00
Price List, with Canopy Top.....	19 00	22 15	25 25	28 85	32 50

The Triplex Grate, as we apply it with our patent stop and combined skaker, is the very best grate known in stove construction. Dust Flue attachment. A clean stove, a strong heater, because of the V-shaped bottom flue which heats the entire bottom. Nickel Trimmings, Feet, Foot Rails, Foot Rail Brackets, Name Plates, Side Panels, Nickel Canopy Top. Triplex Grate goes as a rule. In ordering stoves or repairs, if you have a preference as to grate and canopy top, please make that clear in your order. For description of grate see page 74.

## COLUMBIAN SYLPH.

A direct draft Single-Heating Stove, made in four sizes. The most modern stove made and very easy to repair, as its parts in the centre and the magazine is lifted out the top without removing bolt or screw. Triplex or centre draw grate. The triplex is arranged with our patent stop and combination shaker: simple, durable, and the very best grate made to clean your fire. Dust flue attachment complete.

Nickel Adornments—feet, skirting, foot rails, foot rail brackets, name plates, side panels, hinge pins and knobs. Nickel canopy top when so ordered at additional cost. See Price-Lists.

“ “ with “ Top.....	15 00	17 00	19 65	22 75

For description of grate see page 74.

# COLUMBIAN PANSY.

Hot-Air Double or Single Heater.

## How to Operate Our Triplex Grates.

When cleaning your fire close the ash pit door and slide tightly, open the damper in the pipe (if any) full, draw out dust damper and place your shaker on the shank of the grate by opening the shaker-hole cap. Throw shaker backward, or to the right against the opposite nib, where it will stop; remove the shaker and apply it as in the first instance, and repeat the operation until the fire is freed from dead matter. By this process you are changing the grate surface exposed to the fire every time you agitate it, and prolong the life of the grate. When starting the fire, first apply the shaker in the regular way to see that the grate is in position for kindling the fire. In the event of starting the fire without this test the grate may not be in position, and if so, you must clean the fire box to adjust the grate. This rule and hint covers the operation of our Triplex Grates in all of our Columbian Stoves, Ranges & Furnaces.

Made with Triplex Grate.

	No. 23. Size of Fire Pot, 9 1/4.	No. 25. Size of Fire Pot, 11 1/2.	No. 27. Size of Fire Pot, 13 1/4.
Price-list with Hot-Air Cap and Urn. ...	\$24 00	\$27 50	\$31 00
" less " " " " " " ...	23 00	26 50	30 00

Same stove as described on page 87, with the addition of a Revertible flue (Base Heating). The Columbian Pansy is sent with Hot-Air Cap and Urn, unless "less Cap and Urn" is written in the order.

## THE COLUMBIAN CADET

Made Direct Draft and Revertible Flue with Tea Kettle Attachment.

No.	19-9	inch	Fire	Pot.....	\$11 50
"	111-10½	"	"	" .....	14 00
"	112-12	"	"	" .....	17 00

"	111-10½	"	"	" " .....	16 50
"	112-12	"	"	" " .....	20 00

## COLUMBIAN AIR TIGHT.

Two sizes.

No. 13.....	<del>\$18.00</del>	\$20.00
" 14.....	<del>\$20.00</del>	\$22.50

The above price-list includes urn and swing cover, name plate, foot rails nickeled. For nickeling feet and skirt, we charge \$1.50 additional list.

The Columbian Air Tight is the latest production of this class of stoves. We feel satisfied that this heater will meet with very favorable notice from those who require a first-class article. It is complete in all respects and possesses a number of modern and valuable features not in any other heater of its class. It is ornamental, symmetrical in appearance and nicely finished with nickel trimmings. We make it of the very best material. The purchaser need not question its durability.

## COLUMBIAN AIR TIGHT

Showing Double Heater.

The above cut represents the Columbian Air Tight as a double heater. This heater stands at the head of its class as a bituminous coal burner. The castings are made heavy so that the heater will stand the wear and tear incident to hard work. To produce the double heater, remove the swing cover and invert the collar underneath it, and supply the hot-air pipe.

## COLUMBIAN AIR TIGHT.

Skeleton View.

This stove is very easily repaired. The above cut shows the skeleton with the front removed, giving an unobstructed inside view. To repair the stove, remove the crown top and the inside dome top. Then take out the bolts in the middle ring, remove the front feed door, pull the upper skeleton slightly towards you, turning the front to the left and lift it off. This gives you free access to the upper fire pot, which can be removed section by section by taking out the bolts. The lower half of the stove is very easily dismantled, but this need not be done in applying the lower cylinder. Remove the bolts in the bottom cylinder, and the old cylinder is easily lifted out. The centre-draw grate can be removed and applied through the ash door. Nickel name plate bolted to crown top. Nickel foot rails attached without bolt or screw. Skirt base and feet made solid. Check damper located in the back part of the smoke pipe collar.

### To Regulate the Fire.

The draft slide in the front feed doors when opened serves to check the fire as well as furnish the fire with a warm-air blast. Close the damper in the ash door and open the check draft in the back pipe collar to check the draft. When shaking the grate to clean the fire, all draft slides should be closed and pipe damper, if any, open, so there may be a full and free draft.

## ALPINE.

Four Sizes.

This Stove has our Improved Anti-Clinker Fire Pot and Grate, Nickel Panels, Name Plate and Urn.

" 23.....	14 50
" 24.....	16 75

## COLUMBIAN SUN.

A Revertible Flue Surface Burner, made Single and Double Heater.

The natural heating capacity of this line of goods is so well known to dealers and the public, that we deem it unnecessary to write an extensive introduction. We can very safely say no superior stove is offered to the purchasing public. The flues are perfectly and scientifically proportioned, and carefully adjusted so that Bituminous or Anthracite coal can be used with success. The flue strips between the main and under bottoms are located so that the burning gas, in its exit to the chimney, heats the flue line around the entire bottom to a very high degree, making the COLUMBIAN SUN a powerful base heater. All the parts exposed to the fire are heavy and are substantially made. The ornamentation is bold, richly carved and artistically designed. The grate is a centre-draw shaking grate, and with the aid of the anti-clinker door the fire can be easily freed from cinder and all dead matter. The dealers securing the sale of this stove can give their customers an article of utility and merit. Illustrated on pages 96, 97 and 98.

The COLUMBIAN SUN is made with ovens in the tops for all sizes at a very slight addition to list price. They go, as a rule, less ovens. Let your orders indicate clearly what you desire.

## COLUMBIAN SUN SURFACE BURNER.

# LUXURY.

For Hard or Soft Coal.

A neat, open Stove, with Sheet-iron Back and Dust Flue, Nickel Name Plate and Urn.

No. 12 .....	\$9 00
" 14 .....	10 00
" 16 .....	11 50

## NOTICE.

---

In our Furnace Book we have strongly advised, and repeat here in our Catalogue, the convenience and necessity of supplying your library, sitting room and parlor with one of our Columbian Chime, Double-Heater Fireplace Stoves, as shown in cut, or Columbian Prize (portable), as best conforms to your idea and local conditions. If arranged as shown in cut on page 109, you can warm the room above with the same fire, while your Stove is always out of the way and ready for service. This construction is highly ornamental, eminently serviceable, and a very economical combination with Furnace and Hot-Air Heating. Buildings of modern architecture are incomplete without a commodity of this class. Builders can go nowhere to find a superior article, and there are but few, if any, equal to it. The prices are so reasonable that any man building a home will find this beautiful Stove available. Our Columbian Chime and Prize can be used for natural gas. Every dealer is recommended and solicited by us to place a line of these goods upon his floor, as we believe that they will find them profitable and ready sellers,

See illustration on page 109.

## COLUMBIAN CHIME.

Showing Circle and Square Front.

The dealer will be careful when ordering to name style of Front desired.  
 No. 15, 14 1/2-inch Fire Pot, with Plain Front, Tile, Nickeled Skirt, Nickel  
 Name Plate and Foot Rail.....\$19 50  
 Add to price list for Nickeling Square or Circle Front..... 2 00  
 If Nickel Front is desired, so specify in your order. Deduct from list 60  
 cents if Skirt is not Nickeled. Size of Frames, 32 x 33 and 30 x 33.

## COLUMBIAN PRIZE.

Three Sizes. With Plain Feet and Skirt, Nickel Name Plate, Foot Rail and Two Tile.

A Franklin Stove, made with Round Fire Pot, suitable for natural gas, hard or soft coal. For coal a Round Fire Pot is used; for natural gas, Brick Lining.

No. 11, 11-inch Fire Pot.....	\$14 00
" 13, 13 " " .....	15 50
" 15, 14½ " " .....	17 00

If Nickel Feet and Skirt are desired, add to list 75 cents.

We supply Nickel Side Panels for Front if desired, at list price, \$1.25.

## NOBBY.

Five Sizes. Mounted with Russia Iron, Swing Hearth Door, Swing Cover and Nickel Spun Urn.

In Ordering, please mention if Foot Rail is desired.

	<i>Casting. less Foot Rail.</i>	<i>Casting with Rail.</i>	<i>Finished in Russia Iron, less Foot Rail.</i>	<i>Finished in Russia Iron, with Foot Rail</i>
No. 8.....	\$2 50	\$3 00	\$5 00	\$5 50

" 12.....	5 90	6 40	10 40	10 90
" 14.....	7 90	8 65	12 90	13 65

Made with or without anti-clinker door. If anti-clinker door is desired, it should be so stated in the order.

## ACTIVE.

Three Sizes. For Coal.

A cheap base, having Spun-Urn Ornament, Sliding Door, and our Improved Grate.

	<i>Castings, Complete.</i>	<i>Finished, Common Iron.</i>	<i>Finished, Russia Iron.</i>
No. 8.....	\$2 50	\$4 50	\$5 00
" 9.....	3 00	5 50	6 00
" 10.....	3 55	6 50	7 00

Rails, 50 cents additional.

# COLUMBIAN ULSTER.

## Four Sizes.

This stove has gone through a series of changes, so be sure to get correct name and number in ordering stoves or repairs for same.

Last Improvement, 1895.

We have improved our already popular Ulster Stove, of which thousands have been sold, by enlarging Lower Cylinder and adding the Draw-Centre Grate, and can warrant it to give satisfaction for any kind of fuel. We have added plain Foot Rails without extra charge. In ordering Upper Cylinder, be sure to state whether Feed Door slides or swings. The improved series of 1891 are made with slide doors.

No. 113.....	\$8 50
" 115.....	10 50
" 117.....	13 00
" 120.....	17 50

Skirting, 50 cents additional to list.

# COLUMBIAN ULSTER.

1892 Pattern. Four Sizes.

With Collar Back and Draw-Centre Grate, only.

Improved 1895.

In ordering Upper Cylinders be sure to state whether Feed Door slides or swings.

No. 113.....	\$9 00
" 115.....	11 00
" 117.....	13 75
" 120.....	18 25

Skirting, 50 cents additional to list. In ordering, say "Columbian Ulster with Collar Back, 1891," or we may send you a different stove.

Hot-Water Coils for our Columbian Ulster Stoves furnished at the following list prices :

	One Coil.	Two Coils.
No. 113, $\frac{3}{4}$ -inch Pipe.....	\$1 50	\$2 00
" 115 " " .....	1 65	2 30
" 117 " " .....	1 85	2 60
" 120 " " .....	2 00	3 00

Hot-Water Coils furnished for other Stoves and Furnaces of our make.

# COLUMBIAN ULSTER PORTABLE HEATER.

Suitable for Hotel Offices, Bar Rooms and Restaurants.

	Casting.	Finished in Galvanized Iron.	Finished in Russia Iron.
No. 115—15-inch Fire Pot.....	\$15 00	\$18 00	\$21 00
" 117—17 " " " .....	18 00	21 25	25 00
" 120—20 " " " .....	23 00	27 00	32 50

Made with Centre-Draw Anti-Friction Grate and Clinker Door.

## COLUMBIAN CROWN HEATER.

The COLUMBIAN CROWN HEATER represents an entirely new departure of Stove construction, and enables the dealer to supply a strong, powerful and economical Heater for Hotel Offices, Small Churches, School Houses and Station Rooms. This Heater is made to operate upon the Ventiduct System, and hence heats by CIRCULATION and RADIATION.

The cut illustrates it as a Double Heater operating upon the circulating system, doing double work.

We indicate by this illustration that the Columbian Crown Heater is of sufficient power to permit opening the Register and Hot-Air Damper in the Crown Top at one and the same time. The arrows shown in the cut indicate the course of the rapidly moving currents of cold and warm air under the draft of this Heater.

By this process the room in which the Heater operates is rapidly and quickly emptied of cold air and supplied with warm air. The forces of attraction and radiation are in operation as long as the Heater is fired.

We call the dealers' and consumers' special attention to this important feature and construction on all of our leading Double-Heating Stoves. The swing cover can be removed or set aside for the purpose of using a boiler or kettle for hot water. The Heater can be recommended and will sell at sight because of its superiority and simplicity.

## COLUMBIAN CROWN HEATER.

	<i>Castings and Steel Drums.</i>	<i>Finished Russia Iron.</i>
No. 36, 16-inch Fire Pot.....	\$24 00	\$33 00
" 40, 19 " " .....	31 00	40 00
" 44, 21 " " .....	40 00	50 00

The above list price does not include bar-room pan.

Read description of this Heater on page 117.

# IMPROVED "WOOD AIR TIGHT" HEATER.

The most perfect and up to date Wood Air Tight now on the market. Economical, reliable and safe. Will heat your room in less time with less consumption of fuel than any other class of Stove made. Money and labor saved by the use of this Stove. Suitable for use in any room in your house, as well as Halls, Schools, Offices, etc., etc. Being lined with heavy sheet steel it is durable as well as attractive in its appearance.

	<i>List Price, less Foot Rail.</i>	<i>List Price, with Plain Rail.</i>	<i>List Price, with Nickel Rail.</i>
No. 1, 18 In. Long, 14 In. Wide, 14 In. High,	\$7 50	\$7 85	\$ 8 15
No. 2, 22 In. Long, 16 In. Wide, 20 In. High,	8 50	8 85	9 15
No. 3, 25 In. Long, 18 In. Wide, 24 In. High,	10 00	10 35	10 65

Burns anything Combustible, from a Corn Cob to an Oak Knot.

It has the following advantages over any other stove of its kind :

A Cast-Iron Bottom, which cannot be injured by heavy wood falling on it, and which holds the feet in their proper position.

A Double-Seamed Top, avoiding all possibility of Top and Body coming apart, and, making a perfect Air Tight Joint.

A Cast-Iron Draft Flue on the inside of Stove, which will not warp or twist as sheet-metal is sure to do.

A Cast-Iron Register Draft Wheel on Front of Stove by which the air can be admitted in large or small volume, and which can be regulated with a touch.

The fuel may be ignited by dropping a lighted paper through the register.

A body of genuine Russia Iron which makes a handsome finish and does not discolor from the heat.

Order a Sample Stove and judge its merits.

## THE TIGER.

A very substantial, cheap, Cast Cylinder Stove, for small offices or bed-rooms.

" 38.....13 50	"	7	"	"

## FURNACE DEPARTMENT.

The tinsmith or furnace man who proposes casing one of our furnaces must remember that from the top of the steel drums to the top of a flat cone there must not be less than twelve inches. To contract the warm-air pipe below the measurements we suggest is to do violence to your furnace and coal supply, and not reach the temperature you desire. The carpenter, builder and architect are not wholly faultless, and the furnace man is very often obliged to work after the work they have spoiled in the start, since one or both may have so constructed their work and created local defects which the furnace man cannot overcome without the loss of work for the one, the friendship of the other, perhaps both. The register is no less a factor. A ten-inch register is reduced by the face thirty-three per cent., hence care should be taken to have the register equal to the capacity of the pipe to which it is attached. The estimates placed upon the capacity of our furnaces are very carefully calculated, and when the furnace has been properly arranged, can be relied upon with a reasonable degree of accuracy. To warm a house with a furnace, care and thought should be given in the laying of the foundation and construction of the division walls. The location of the pipes and suggestions as to sizes of pipes are so very helpful with the construction of the wall that they should not be overlooked.

If possible keep your risers out of the north or west walls. If you must lead in this direction see that your pipes are well secured by a good coating of asbestos the entire length. A small house with an unusual number of small rooms requires more labor and coal with a larger furnace to heat it than a larger one with less apartments. The tradesman and purchaser should not be parsimonious in these points and give the manufacturer, dealer and himself trouble. Every room and hall in a building should be connected with the furnace independently of the warm-air supply of any other department of the building; that is to say, from the start to finish there should be but one register in any one pipe leaving the furnace. You cannot successfully at the same time heat two rooms off one pipe. The additional expense incurred in this form of construction is more than returned in the comfort experienced. See illustration on page 127.

In heating a single audience room for school or church, to carry the heat from your furnace through a number of small pipes with the registers placed here and there in the floor, as against one large pipe off the top of your furnace with a register of ample capacity, is to do violence to your furnace and coal supply. When one straight pipe is used, a hot-air damper between the top of the furnace and the register, with a door for an opening in the furnace casing for a hot-air exit, would be useful.

The suggestions and explanation which we have written with the aid of the diagram will make clear the ideas and plans which we suggest. The cut on page 127 is made to illustrate two plans, one with a large pipe, say twenty-two or twenty-four inches straight off the top, the other with three ten or twelve-inch pipes running in oblique lines to the points where the registers are located. The one large pipe plan is very much more effective and superior than that of the three-pipe plan. To illustrate: One twenty-inch hot-air pipe in area is equal to 315 square inches. Three ten-inch pipes have an area of 232 square inches; hence, the large pipe has very much more capacity, as well as less friction and radiation to overcome. If the object were to fill the room with water in a given time you would not accept the three-pipe plan. Do not lose sight of the fact that your room must be filled with warm air and a dozen pipes of a given size are not equal to one pipe, equal in size to the area of all the pipes to do the work in question.

The application of a cold-air box is essential. First—The size should be equal in area to two-thirds of the hot-air pipes taken off the heater. Second—The cold-air supply should be taken from the north or west side of the building. Make no mistake in that. If you draw the cold air from the south or east the currents of warm air move sluggishly, if at all, and the furnace is warming your cellar, consuming coal, and your dwelling is not warm. We cannot over-estimate the value of a cold-air box connected to the inside of the building, either from the hall or some other suitable location. The atmosphere on the inside of many churches, when the fire is started, is quite as heavy as that on the outside, and to assist in the movement of the currents of hot air an application of the kind mentioned is very helpful.

Cold-air box No. 1 draws the cold air off the floor and out of the dwelling. To use this supply let your registers be of ample size and capacity and in keeping with what we have suggested, with a damper at point A. To use this supply open the damper

at A and close at B, and you have a complete circulation system. When working box No. 1 close damper in box No. 2 at B. When you wish to work box No. 2 open damper at B and close A.

The value of two small furnaces of equal capacity (or nearly so) over one large one should not be overlooked. The difference between extreme cold weather and days when very little fire is needed argue in favor of the two-furnace plan. Many are the

times in which one small furnace will heat a large church or room saving coal and leaving you supplied with a reserve force in the second furnace for any attacking storms or blizzards. Any additional expense is worked off in time in the durability of the furnaces, and you have secured for yourself the comfort desired. Hence use two small furnaces instead of one having the capacity of both. It is better in large buildings.

# COLUMBIAN VULCAN FURNACE.

Finished and High Construction.

## Height of Furnace Finished.

No. 44, 5 feet, 10  $\frac{1}{4}$  inches. No. 40, 5 feet, 7  $\frac{1}{4}$  inches. No. 36, 5 feet, 6  $\frac{1}{2}$  inches.

## COLUMBIAN VULCAN FURNACE.

Cut Showing the Base with Triplex Grate.

Made with Centre-Draw or Anti-Friction and Triplex Grates.

The Triplex Grate needs little or no explanation. We claim, first, that it is the best made.

*Second.*—It is so adjusted to the Columbian Vulcan Furnace as to operate perfectly. Our Shaker and Grate, as applied one to the other, leaves the Grate when removing or applying the Shaker in a perfect position. This grate (or one and all of the bars) can be removed or applied through the Ash-Pit Door.

*Third.*—Our Centre Bar, which equally divides the surface of the Grates, makes the division of labor equal between the two sides of the Fire Pot.

*Fourth.*—The Columbian Vulcan Furnace is made and supplied with the most modern improvements in Furnace construction. It is made heavy and warranted to be a substantial and reliable article to every one who buys it. The Triplex Grate, as applied by us, is the best-known Grate construction offered to the trade. This is our challenge after the tests and trials to which we have subjected this Grate.

## COLUMBIAN VULCAN FURNACE.

## COLUMBIAN VULCAN FURNACE.

### No. 36.

*Heating Capacity.*  
16 to 20,000 cubic ft.

*Two-Story House.*  
Not less than 9-in. pipes first floor.  
" " " 8-in. " second floor.

*Air Supply.*  
250 sq. in.

### No. 40.

*Heating Capacity.*  
20 to 30,000 cubic ft.

*Two-Story House.*  
10-in. pipes first floor.  
9-in. " second floor.

*Air Supply.*  
350 sq. in.

### No. 44.

*Heating Capacity.*  
30 to 40,000 cubic ft.

*Two-Story House.*  
10-in. pipes first floor.  
9-in. " second floor.

*Air Supply.*  
450 sq. in.

## ADDITIONAL HINTS.

Sizes of Registers and Pipes used, according to size of rooms to be warmed.

First Floor Rooms.....	10-inch Pipes, with 10 x 16 Registers.
" " " .....	10 " " " 10 x 14 "
" " " .....	9 " " " 9 x 12 "
Second " " .....	4 x 10 $\frac{1}{2}$ Riser, " 8 x 12 "
" " " .....	4 $\frac{1}{2}$ x 10 $\frac{1}{2}$ " " 9 x 12 "
" " " .....	5 x 12 " " 10 x 16 "

Round Pipes from the Furnace to Riser Pipes leading to upper rooms should be 8, 9 and 10-inch diameter, according to the size of room to be warmed.

The estimates of the heating capacities of the Columbian Vulcan Furnace are low, and when the Furnace has been properly arranged, can be relied upon with safety. When heating School Rooms, Churches, Stores, etc., and only one Register is required, and that directly over the Furnace, you can safely count upon 15 per cent. additional capacity, and, under such circumstances, use for the several sizes not less than 20, 24 and 26-inch Registers, and these should be without valves. When trenches are put under the Furnace for a cold-air supply, see that it is of sufficient capacity to supply your Furnace. It should be kept free from dust and dirt.

## THIS SERIES OF THE COLUMBIAN VULCAN FURNACE

is made in four sizes, with the same Drum construction as that of the Columbian Banner. We show it with a full-side sectional view, illustrating the route of smoke and burning gases to the smokepipe connection. This form of the Vulcan Furnace is made with cast cylinder. In this construction, we line the Drum about six inches above the bottom of the Feed Door with fire brick, so as to prolong the life of the Drum and increase the fire surface. This makes a powerful Heater, and we can safely say is the very best form of Furnace construction known to the trade. By studying these illustrations, our customers may very easily grasp our idea of Furnace work and learn the parts of our Furnace, so that orders for Furnaces or Castings may be clear and easily understood. The numbers indicate the difference as to the Columbian Vulcan form of Drum construction desired. Combinations for Hot-Water Heating supplied to this form of construction; prices given on application. The dealer should fire every furnace before turning it over to his customer. The joint at the Feed-Door Frame, as well as all sand and puttied joints, should be carefully examined in the final setting. The chimney should be sounded and tested before the smokepipe is attached. In many new buildings chimneys are left clogged with mortar and broken brick. Every Furnace Warranted. On page 138 we name and number the kinds of brick to complete a cylinder. The Section Brick go with every Furnace for the protection of the Drums and the Drum-Ring Brick when the Furnace is used for Bituminous Coal. Nos. 136, 140, 144 and 150.

## COLUMBIAN HOT-WATER HEATER.

This Hot-Water Heater with its appliances is arranged for our Nos. 140, 144 and 150 Columbian Vulcan Furnace and the Nos. 48 and 52 Columbian Banner Furnace.

These Hot-Water Heaters will carry Radiators of sufficient surface to heat 3 or 4 rooms off the smallest and 4 to 5 rooms off the largest measuring from 1600 to 2000 cubic feet each.

### List Prices for Hot-Water Heaters as Shown Above.

Large Water Heater, suitable for No. 150, with 8 inside connections.....	\$55 00
" " " " " " 144, " 6 " "	..... 40 00
" " " " " " 140, " 6 " "	..... 35 00

## CUTS SHOWING THE COLUMBIAN VULCAN FURNACE.

No.	Castings.	Castings and Radiators.	Finished in Galvanized Iron.
No. 136.....	\$35.50	\$40.00	\$58.00
" 140.....	43.50	49.50	71.50
" 144.....	58.50	66.00	90.00
" 150.....	81.50	91.00	116.50

Cold-Air Screens, each 75c additional net. From two to three Screens should be used when screens are needed.

Cut No. 1.

The cold-air pit and the foundation of the furnace should be built as illustrated in Cut No. 1. It is advisable to cement the bottom and lay the bricks in good cement mortar so that it will be free from the accumulation of water. Make the cold-air trench larger than the actual requirements and reduce it with the damper in the box if needful. Give the furnace plenty of cold air.

Cut No. 2.

Cut No. 2 illustrates our check damper and chain attachment connected to ash-pit draft door, all of which can be manipulated from the sitting room or the parlor over the furnace. The draft door and dampers are operated each independently of the other. The thermometer above registers the temperature of your room. The above attachments are subject to additional cost over price

## COLUMBIAN BANNER FURNACE.

Illustrations on pages 144, 146 and 148.

**Made in Five Sizes.**

No 36, 26-inch Casing.

No. 40, 30-inch Casing.

" 44, 34 " "

" 48, 38 " "

No. 52, 42-inch Casing.

This Furnace is our latest production of a low-priced Furnace. It is offered to the trade fully guaranteed to do the work successfully. It possesses the durable quality, because it has the weight. It is a powerful Heater, because it has the radiating surface. The draft is good and will not become sluggish, because the flues are self-cleaning. The Flue construction is made so as to throw the burning gases along the surface of the Radiating Drums, which act quickly and effectually, securing the very best results. Its simple construction makes it easy to mount and repair.

We use the Centre-Draw Grate with Lever Attachments, and we can insure its construction and durability. We have so arranged it that it can be applied and removed through the Ash-pit Door without otherwise disturbing the Furnace.

Never let your ashes bank under your Grate. It pays to keep a clean Ash pit.

### HOW TO ORDER.

You cannot be too careful in ordering what you want; to miss a word in the name, a figure in the number, neglect to name the kind of Grate or Cylinder desired and its application, setting the manufacturer to guessing or writing while your customer is waiting and troubling you, is not delightful. Study your Catalogue.

Price list given on page 145.

# COLUMBIAN BANNER FURNACE.

Made in Five Sizes, Check Damper included in List Price.

Price List, Page 145.

Chain, Pulleys, Thermometer, Cold-Air Screens and Vapor Pans, extra charge and sent only on special order.

Architects, builders and contractors should examine this Furnace, as we can assure them that they cannot equal it for the money anywhere else. Our reputation for making honest goods cannot be questioned, and this Furnace is a production of utility and merit. Made with Centre-Draw Grate, no other.

The Columbian Banner Furnace is supplied with what we call a combination Swing and Drop-Ash Door, with a Check-Draft Damper which is riveted to the Smoke Pipe and connected to the Drop Ash-Pit Door with Chain and Pulleys, as shown in cut. This enables the housewife to control the draft from the room above. These articles are charged additional. Please get numbers and articles named clearly in the make-up of your orders. Numbers are significant, names mean something, hence make up your order with care. When ordering repairs let the "Patent" and "Improved" date be mentioned.

## COLUMBIAN BANNER FURNACE.

Kindle your fire with and use good furnace coal. REMEMBER that a cylinder of a furnace, either in brick or iron, for soft or hard coal, is of sufficient depth and capacity to hold fire over night and through the day with reasonable attention. NEVER, and that is in no case, fill the cylinder beyond its capacity. The bottom drum ring is not a grate, and hence the cylinder should never be filled so that the coals will spread and burn on the top of the ring or against the hot-air tubes.

Good combustion and a strong heat require a clean fire, and this can be had with our Centre-Draw Grate and with a poker through the clinker door, and for this reason we say, if you want your furnace to heat well, work well and wear well, keep a clean fire and the coals below the bottom drum ring. Never let the ashes gather in the ash pit so as to endanger the life or action of your grate. Keep a clean ash pit.

## COLUMBIAN BANNER FURNACE.

Cased. Made in Five Sizes. Study Directions and Measurements.

Every Furnace Warranted. Hot-Water Heater Can be Applied to Nos. 48 and 52.

*Directions for setting up furnace.*—We would recommend to the hardware man, tinsmith or stove dealer, when setting up the Furnace on ground or board floor, that he use one layer of brick for foundation. Be sure that your foundation is level and neatly made. See that the Feeder-Door frame, when bolted to the casing, is well puttied and every joint gas-tight. Before making the stove-pipe attachment, we advise the dealer to examine the chimney, see that it is clean and draft good, as it may save trouble after the work is done. Before firing see that the Grate has not been lifted from its bearings in transit.

## COLUMBIAN BANNER FURNACES.

The measurements given below are to aid the dealer who mounts the steel drums and cases the furnace. We do not hold ourselves responsible for errors made in the construction of steel drums outside our factory.

## COLUMBIAN VULCAN FURNACE.

The above cut is to illustrate the No. 140 Vulcan Furnace with the hot-water attachments as illustrated on page 139. This hot-water attachment is intended to warm rooms which cannot be reached with hot air. The Columbian Vulcan with the hot-water combination is a very efficient and satisfactory heater. See prices on pages 139, 140 and 141.

## FURNACE CHECK DAMPERS.

The above cut represents our Columbian Banner Furnace Check Dampers, suitable for six, seven and eight-inch pipe. Hot-air furnaces should be checked without passing the cold air through the radiating drums. Our Furnace Check Damper applied to the pipe checks the furnace without suddenly cooling the drums. This damper, which is supplied with a ratchet stop for the admission of cold air, serves to check the fire, holding it in a very low state of combustion, thus reducing the consumption of coal to a minimum. These dampers can be used on stoves of any kind having pipe the size of the dampers, viz: 6, 7 and 8-inch pipe.

## STOVE REPAIRS.

We are successors to, and the only foundry that can furnish Repairs for Stoves made by the following firms :

Smith, Francis & Wells,  
Smith, Wells & Co.,

Smith, Johnson & Co.,  
Shantz & Johnson,

Shantz & Keeley,  
O. B. Keeley & Co.

## BLACK JACK.

The Great Water Paste Stove  
Polish.

A beautiful jet black polish, manufactured especially for new and old Stoves, Russia pipe, etc.

Mix with water to the consistency of cream.

Put up in 12-ounce cans; retails at 10 cents per can.

## BLACK EAGLE STOVE POLISH.

The best to secure brilliancy, durability, cheapness, and to save labor.

Recommended to the Stove Trade as a perfectly reliable article.

After one trial, no other will be used.

Put up in 5-lb. tin cans, with full directions on each can.

## PATTERNS.

**Japanese, Persian, Moresque and Indian Lattice.**

An advantage peculiar to the *Glide Movement* Register is, that by unscrewing the face the *Valves* can be *removed and replaced easily*, and the flue reached without taking the Register box from the wall.

*Price same as Vertical Wheel.*

**Indian Lattice Pattern.**

**Japanese Pattern.**

For list of sizes in Indian Lattice Pattern, see page 163.  
Sizes marked with a Star made in the Persian only.

## MACHINERY DEPARTMENT.

We have connected with our works a machine shop, under the superintendence of a first-class machinist, and are prepared to furnish:

Round and Square Cleaning Mills,

Frames, Mandrels and

Counter-Shafts for Emery Wheels,

Upright and Horizontal Drills,

Catch Cutters, Taps and Dies,

Hangers, Pulleys, Shafting and any

Machinery used in Stove Foundries.

We also repair ENGINES, MOWERS, REAPERS, LAWN MOWERS and all AGRICULTURAL IMPLEMENTS upon short notice. First-class work at moderate prices.

**Hot-Water and Steam-Heating Castings a Specialty.**

**NO. 1.—GRINDER.**

**NO. 2.—GRINDER.**

**HORIZONTAL DRILL.**

**CATCH CUTTER.**

**NO. 3—GRINDER.**

**Prices furnished on Application.**

**UPRIGHT MOUNTER'S DRILL.**

**ROD AND NUT CUTTER.**

Prices furnished on Application.

## HOW TO ORDER BRICK.

The above cut is intended to illustrate to the dealer the situation and name of the Bricks which compose the fire box of a Range. The illustration is that of a Right-hand Range (*oven on the right*). In ordering, it should be stated clearly whether the oven is on right or left. Names, numbers and dates should be given fully and lucidly. The "Oven Brick" are the Brick lying on the oven side of the fire box, and called "front and back oven;" "Back Key Brick" lie at the back; "Front Key Brick" at the front. The front is often lined with cast iron, and this piece is then called a front grate. "Grate Brick" are those across the left end of a Right-hand Range and across the right end of a Left-hand Range, according to the situation of the oven. The Grate Brick usually occupies the position in the fire box that the water back does. When Ranges were first made, the custom was to line the end of the Range with a cast lining called grate, hence the name "Grate Brick."

In our older Ranges lined that way, we termed that casting "Left-end Grate." We regard as the front of a Range, the side on which the oven door opens. Oven right, Right-hand Range. Oven left, Left-hand Range. Back, right and left end designated accordingly. We do not think that there are two fronts to a Range, and are persuaded that we are logically correct.

## SECTIONAL VIEW OF COLUMBIAN CHOICE RANGE.

If the dealer, when ordering repairs in parts of a Furnace, will use the names printed on this page, and for parts not mentioned here refer to pages 137 and 138, the order can be made clear.

Series--7-18.

000

New Cappello, and Columbian Plate of 1893 and 1894-7-18 series, was first made as illustrated on page 38 of 1894 catalogue. When the left hand range of this series was built in 1895 as illustrated on pages 38 and 39 of the 1896 catalogue the panel was changed on the oven door as illustrated and the name of the range put on the fire door, with date 1896. Later the oven door panel was changed by putting the name and date on the oven and fire door (1897). The fire door panel designated 1898 with trade mark. All this is common to the Columbian Plate of this series. In 1898 the feet was made higher, skirting wider, end door and end changed, and the expansion pieces in the top new, oven door panel changed and marked 1898, broiler door new, see catalogue 1898, page 40.

This series of New Cappello was first made with a pried open door, and large panel on the door with tile, and open skirting, was made about 1886, see catalogue 1889. The tile was diagonal. The reservoir range had raised reservoir. In 1891 the range was changed by putting on the choice skirting and feet. The top of this series was first made whole except the expansion piece. In 1891 the top was cut at ends and the choice skirting and feet were used until 1895, see catalogue 1891, page 13 and catalogue 1895, page 19. In 1895 the New Cappello and Columbian Plato were made exactly alike by using the same oven door panel as illustrated on page 21 of the 1895 catalogue, and pages 42 and 43 of 1894 catalogue. No catalogues issued in 1895. In 1895 the tops of this series of ranges was changed by cutting them front and back and not in the ends as before. This change was indicated on the range by printing on the front feed door "Top Improved in 1895." In 1896 the style of skirting changed to the 7-18 New Cappello feet and skirting and the Cola. Choice oven door and a new oven door panel was made as indicated by cut on pages 46 and 47 of the 1896 catalogue. To indicate this change there was printed on the front feed door "Top Improved 1896," and oven door panel marked 1896. This means the Cola. Plato and New Cappello, as shown on pages 46 and 47, 48, and 49 of our 1896 catalogue are alike and will remain this way for 1896.

## EXTRA POLISHED AND NICKEL PARTS.

We give below the list prices on extra nickeled and polished parts, which particular finish may be desirable to some of our customers. We supply a nickel front band for the Columbian Star, Charm and Echo Ranges at the following list prices :

No. 7-18 and 8-18, Square Range.....	90
“ 8-20 “ 9-20 .....	\$1 00
“ 7-18 “ 8-18 Reservoir Range.....	1 15
“ 8-20 “ 9-20 .....	1 25
